## **Connect & Protect 2022**

Why projects fail at the start, not the end

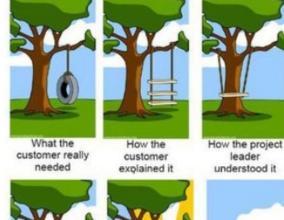

**Esther Bogin** 

## Why are we here?

# To help you better execute projects by:

- 1. Understanding the criticality of the elements at the start that drive overall success
- 2. Recognizing that uncertainty and unpredictability are the norm
- 3. Learning how to design projects to be more resilient and adaptable

## What role do you fulfill on projects you are part of?

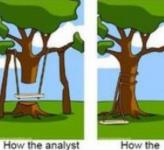

What the beta

testers received

How it was

## The Marshmallow Challenge

4 4

## **Count Down**

#### Learnings

Build a Tower, Build a Team Learnings

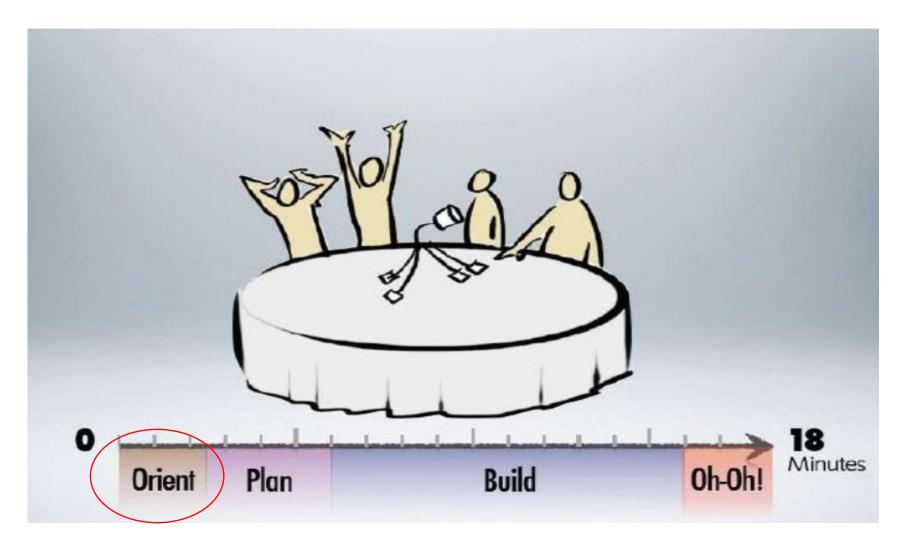

- Investing time up front to plan
- Prototyping matters, fail fast
- Clear and measurable objectives matter
- Testing matters
- Diverse skills matter; so do facilitation skills
- Foundation matters (stronger, then taller)
- Finding hidden assumptions matters
- Projects fail at the start ... not at the end
- Others...?

Use with your teams - details at www.marshmallowchallenge.com

# Starting well has great power

It provides a basis for more easily and effectively addressing future challenges that all projects inevitably face

## Why do you believe project initiation matters?

### Starting projects requires a wide variety of decisions to be made quickly using a variety of project management tools

- Sponsorship
- Strong leadership
- Scope: clear goals and measurable objectives
- Resources
- Budget
- Team composition •

- Governance
- Project planning
- Managing change
- Others ... ?

## Sponsor, Customer, and Project Manager (PM) must forge an ongoing interaction with clear roles to ensure project success

#### <u>Sponsor</u>

- Alignment to Strategy
- Achievement of business results and ROI
- Quick and decisive governance (steering, decisions)
- Highest point of escalation
- Approves significant changes

#### **Customer**

- Achieving business objectives through project execution
- Representing all project deliverables (i.e. a conversion, a new product, an acquisition)
- Making day-to-day decisions
- Defining and declaring of satisfaction for the deliverables (Conditions of Satisfaction)
- Assessing if a change is needed
- Approving tactical changes

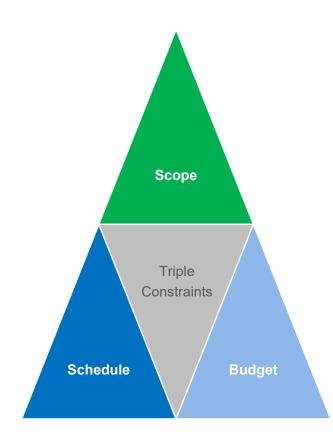

## 

## This is the start of your foundation

#### Project Manager

- Establishing and leading project team
- Day-to-day management of Scope, Schedule, Budget
- Ensuring project objectives are met
- Applying Project Management best practices to minimize risks and resolve issues
- Controlling Change and determining impacts (scope, schedule, budget

## **Flexibility Matrix – Managing the Triple Constraints**

#### **Resources (Cost)**

Cost is most flexible. If necessary, the project can add resources/increase costs per approvals to address needed scope and deliver on time.

#### Schedule (Time)

Timing/meeting commitments is extremely important, however, the project must take the time to deliver the needed platform and capabilities, and demonstrate sustainability. Sustainability is more important than delivering on time.

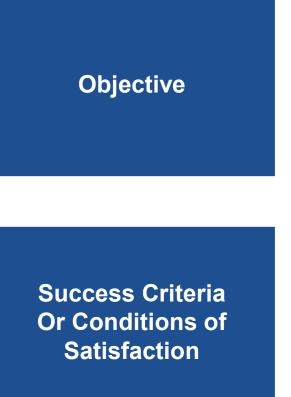

#### Scope (Quality)

Scope is most constrained. The project must deliver high quality solutions that fully address the requirements.

	Least Flexible	Moderate Flexibility	Most Flexible
Resources			Х
Schedule		Х	
Scope	Х		

## **Project Objective Statement and Success Criteria**

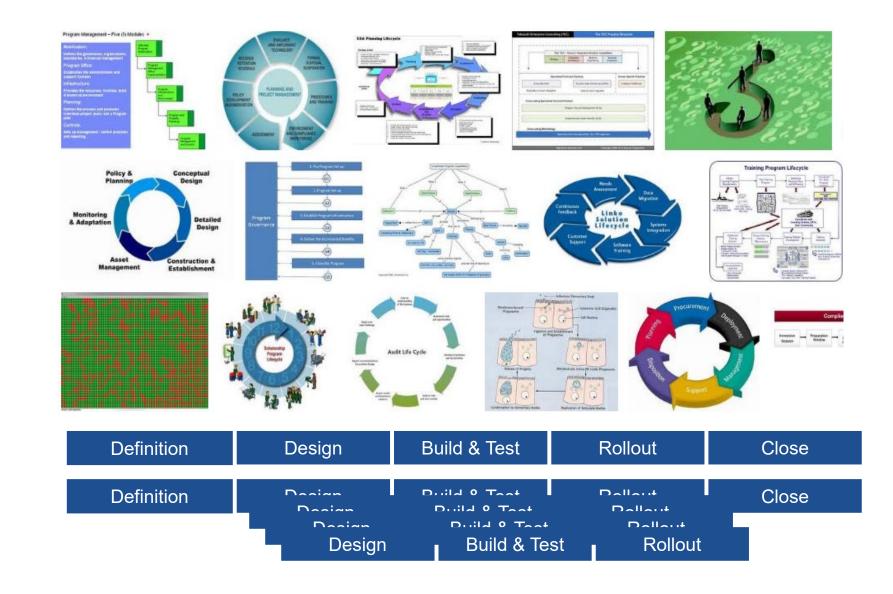

•

#### **Build the tallest freestanding structure using:**

- 20 pieces of spaghetti pasta
- 3 feet of tape
- 3 feet of string, easily broken
- 1 marshmallow
  - The whole, entire, un-cut, un-eaten marshmallow must be on top of the structure
- Height is measured from the table top surface to the top of the marshmallow
- Challenge must be done in 18 minutes

What do all of these lifecycles have in common?

## **Planning!**

### "Plans are worthless, but planning is everything"

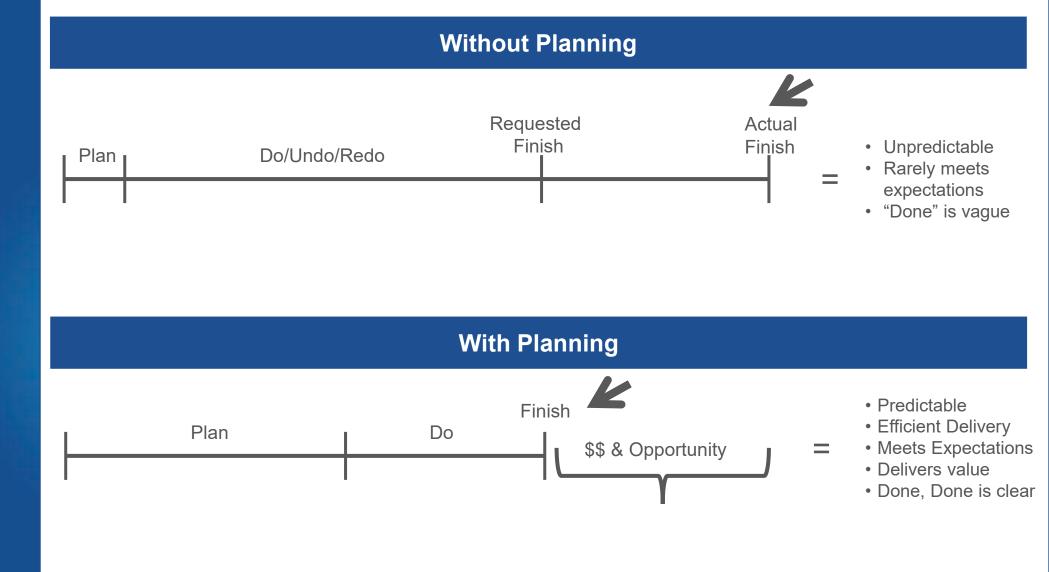

If this is true, why plan at all?

## Leaders of projects spend time on...

#### 1. Planning the project

- Intensive at the front-end
- On-going, continuing
- 2. Running the project
  - Leading
  - Managing
  - "Doing the work" (on larger, complex projects, most of the work is performed by the team)

Successful projects require doing both of these extremely well ... with focus!

Project Management and effective planning decreases implementation costs & delivers the needed business benefit while freeing up resources to pursue additional opportunities

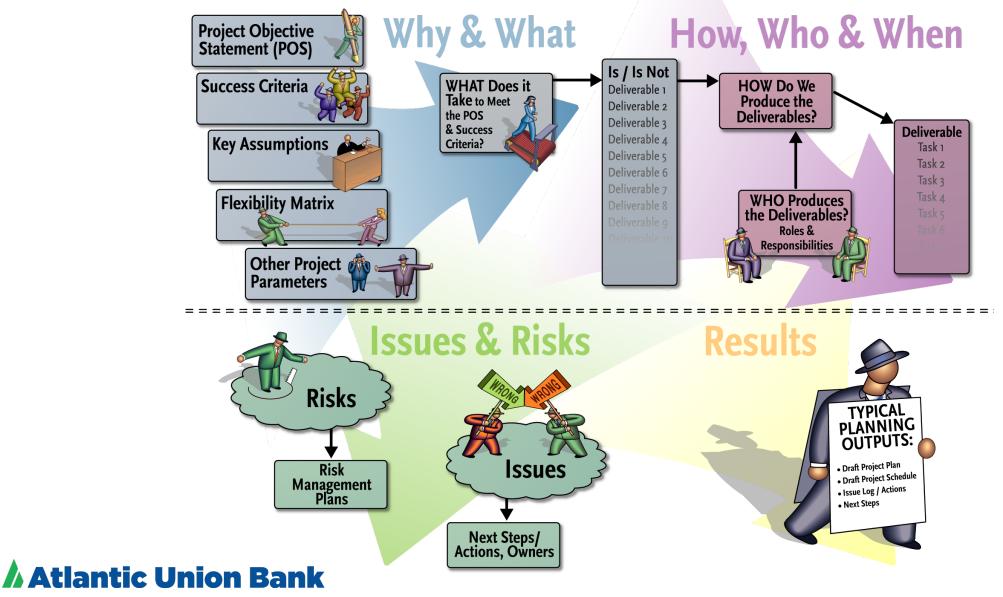

#### Value of Planning Projects

#### A real live example - America: A Tribute to Heroes

- Initiation (calls between executives) occurred 9/17
- Program Office erected 9/18
- **Planning** ensued immediately
- The Telethon went live Friday, 9/21 at 8PM EST and rolled by zone
- The infrastructure to support the call volume and internet traffic included multiple competing telecommunication companies
- The call centers and 10,000 volunteers came from multiple competing financial institutions
- The telethon aired on 30 television networks, 8,000 radio stations, and on the Internet
- "A Tribute to Heroes" raised over \$150 million for 9/11 victims and their families, specifically police officers and firefighters, which was provided to the United Way September 11 Telethon as a result of the telethon

#### **Project Planning Workshop**

Source: IPS FastPLAN Workshop www.ipslearning.com

#### Change is inevitable and if left uncontrolled, can cause project failure

#### **1.** Plan for Change at the Start

- Document the change control process
- Discuss and align with the Sponsor and Customer on the process

#### 2. Control Change Throughout

- Complete a change request form
  - Describe the change
  - Identify all impacts to scope, schedule, budget/resources and quality
  - Identify options to address the change
- Review the change request with impacted stakeholders to determine the best option
- Present the recommendation for approval

### **Design and implement a strong project governance structure**

- Ensure roles and responsibilities are clear and socialized
- Ensure individuals with relevant experience and authority are on the steering committee and project core team
- Design a clear decision and escalation process for the project and ensure the team understands and follows the process
- Use the governance structure to challenge assumptions and key decisions

#### No "rubber stamping" of critical decisions

#### **Program/Project Governance Structure**

	Vendors		Sponsor Customer Manager	Program Office	Core Leadership Team	Steering Committee or Advisory Board
Project: Lead:	Project: Lead:	<b>Project:</b> Lead: Vendor Lead:	Project: Lead:	Progi Lez	ram: ad:	
Scope/Objectives	Scope/Objectives	Scope/Objectives	Scope/Objectives	<ul> <li>Scope/Obje</li> <li>Project: Lead: Vendor Lead:</li> </ul>	Project: Pr Lead: L	oject: Project: ead: Lead: or Lead: Vendor Lead:
Project: Lead:	Scope/Objectives					
Project: Lead:	Scope/Objectives					
Project: Lead:	Scope/Objectives					

## Plan for how decisions will be made

- Misleading experiences
- Misleading pre-judgements
- Inappropriate self-interest
- Inappropriate attachments

#### Encourade a

Seek diverse viewpoints and experience

plan the project

Establish a project culture of being open to challenge and questioning key assumptions and decisions

**Provide opportunities for group discussion and challenge** 

Use a structured or facilitated workshop to collaboratively

- Encourage and welcome "conflict" and differing viewpoints as part of the team interactions
- Use data to challenge pre-judgments and self-interest
- Periodically revisit key assumptions

#### **Decisions: Monitor and Observe**

- Be alert to when red flags are present
- Actively address during team planning and weekly meetings
- Maintain a key decisions log and periodically review and adjust; decisions can be reversed during a project
- Periodically revisit decisions and their results for immediate learning, application, and sharing
